EcoPET

Acoustics for the environment

absorption

mid tones

high tones

Publication: June 2022

EcoPET is our little-big hero.
Its low thickness is characterized by a high sound absorption coefficient. It is also dust-free and completely environmentally friendly. It will take care of your visual and acoustic comfort.
Let yourself be surprised by the original form of acoustic tiles and EcoPET panels.

EcoPET can be considered
a synonym of versatility,
designed to take care of your
visual and acoustic comfort.
A wide range of colors
and the ability to cut any
patterns is our way to achieve
unusual compositions
with high functionality.

EcoPET

architected sound

EcoPET is a material that is very easy to create any spatial or flat shapes with, for example in the form of acoustic tiles.
Thanks to a wide range of colours and thicknesses, along with possible combination with EcoFELT material, you can create designs of your dreams.

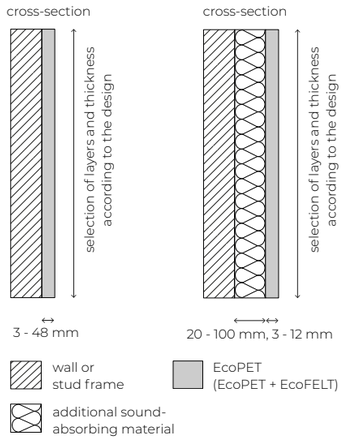
EcoPET

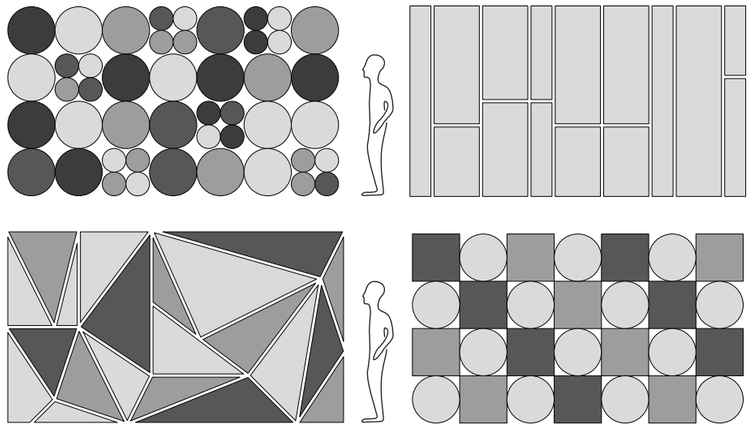
absorption | mid tones | high tones

EcoPET are acoustic tiles, panels and other forms, made of non-dusting, non-toxic and 100% environmentally friendly material which is characterized by a high sound absorption coefficient. With EcoPET, you can cut any shapes, combine colours and thicknesses, and complement them with other sound-absorbing materials. Combination with the EcoFELT acoustic felt guarantees even more interesting visual forms.

Application examples



Exemplary arrangements



Size
1220 x 2440 mm
(maximum size of a board without formatting, after formatting size reduced to max. 1200 x 2420 mm)

Thickness
3, 9, 12 mm and thicknesses resulting from joining EcoPET boards, for example 15, 18, 21, 24 mm

Area weight
1 000 – 4 600 gsm

Material
PET – compressed 50-80% recycled polyester fibers

The color chart is available at architected-sound.com and can be ordered in the form of a sample box.

Country of origin
China, Germany

Category
absorption

Description
EcoPET is a sound-absorbing system made from pressed polyester fibers - odorless, non--toxic and non-dusting material. It can be glued directly to the wall or mounted to a stud frame, filling the space between the laths with sound absorptive material. You can cut out various shapes and combine colours to create interesting visual compositions.

Sound absorption coefficient
$\alpha_{w,\,max}$ = 1.00

Exemplary arrangements
Please find them on our website

Application
Residential (living rooms, halls, kid's rooms etc.), recording studios, classrooms in music schools,, home listening rooms, waiting rooms, offices, conference rooms, concert and theatre halls, public and private spaces

Custom-made
Can be combined with the EcoFELT acoustic felt material.

Various sizes and shapes available, depending on the design concept.

Fire safety
Depending on the thickness, it can be made of materials with flammability class B-s2, d0 or C-s2, d0.
